

Baseline comparability and delivered Gemma suppression

A Different protocols; do not pool

B Gemma layer 20 / 131k

* Paper value: approximate visual reading, checked against v2 Figure 2; not raw counts. Notebook uses a different protocol.

Full-grid local judge: 60 stored zero rows are six copies of ten outputs. No pooled baseline or independence claim across sources.

Gemma: $100 \times [1 - \text{median}(\text{re-encoded mean}) / \text{median}(\text{before mean})]$, pooled over selected features and hook positions; posthoc diagnostic.
