

Open-weight A2 continuation: model-judge labels | primary main contrasts

Astra inclusive current attribution | fixed family of four | held-out main only

Release: incomplete. Screening is not main evidence.

Bars: saved 95% familywise Bonferroni-Hoeffding bounds with worst-case missing labels.

Dots: complete-case means. No bar or dot for unrun/no-label outcomes; no dot without complete pairs.

Same four-comparison open-weight family across A1 and A2; no pooling with earlier studies. Model-judge labels are not ground truth. Architecture comparisons are observational.
